### Special Symbols

3 or more symbols will trigger the Bonus Game “El Dorado’s Gameboard” described in detail below.

3 or more symbols will trigger the Bonus Game “El Dorado’s Wheel” described in detail further.

### Wins

All wins are paid from left to right only. Only the consecutive symbols will pay.

### Calculating Total Win

Win values for matching symbols can be found in the paytable above.

The first number is the count of matching consecutive symbols required on a payline to win the corresponding win amount that is presented by the second number. The paytable values are dynamic and update depending on the stake chosen.

To manually calculate a single win, determine the number of identical symbols lined up in sequence on the payline, starting from the left.

To manually calculate your total win, calculate all wins individually including the ones from the Bonus Games and add them together.

### **“El Dorado’s Gameboard” Bonus Game**

3 or more "El Dorado’s Gameboard" symbols trigger the “El Dorado’s Gameboard” Bonus Game. As the feature begins, the special screen will appear. It includes 20 cells: 11 with a small prize, 6 – with a medium one, and 3 – with a high one.

The goal of this Bonus game is to reveal 3 identical prizes hidden behind the cells.

When it happens, you will be paid with this prize amount.

At the end of this Bonus feature, the total win from it is added to any wins from the Base game round that originally activated this Bonus Game. This Bonus Game is played with the same stake as the Base game round that triggered it. Max payout during this Bonus feature is 35x stake.

### **“El Dorado’s Wheel” Bonus Game**

3 or more "El Dorado’s Wheel" symbols trigger the “El Dorado’s Wheel” Bonus Game.

As the feature begins, the special screen will appear. It presents the Wheel of Fortune

including 10 sectors. 6 of them contain different Multipliers of a stake, 3 – different

Multipliers of a stake plus a Respin of the Wheel, and 1 – the passage to the “El

Dorado’s Gameboard” Bonus Game described in detail above. The maximum amount of

Respins during one entrance to this Bonus Feature is 3.

If you win the “El Dorado’s Gameboard” Bonus Game, you will be directed to it and all

the wins collected before it from the Wheel of Fortune will be paid as well.

If you win the Respin(s), all the wins collected before it from the Wheel of Fortune will be also paid.

At the end of this Bonus feature, the total win from it is added to any wins from the Base game round that originally activated this Bonus Game. This Bonus Game is played with the same stake as the Base game round that triggered it. Max payout during this Bonus feature is 250x stake.

If during a Base game round, you entered both Bonus games, all the wins from them will be paid in addition to the wins collected in the Base game round that triggered these Bonus games.

### **Bonus Game Entry Limits and Order (Edge Cases)**

**One entry per Bonus per Base game round.** Collecting multiple qualifying symbol sets for the same Bonus Game does not grant additional entries. **Exception.** If, in the same Base game round, the player has qualified by symbols for both “El Dorado’s Gameboard” and “El Dorado’s Wheel”, and during “El Dorado’s Wheel” the Wheel awards entry to “El Dorado’s Gameboard”, then “El Dorado’s Gameboard” is played a second time in that round.

**Order when both bonuses are symbol-triggered.** “El Dorado’s Gameboard” is played first, then “El Dorado’s Wheel.” If the exception above occurs, the sequence is: Base game → Gameboard → Wheel → Gameboard.

### **“Respin” Bonus Feature**

The 10th reel in the Base game is special and includes the “Respin” symbol in addition to 6 Fruit symbols mentioned in paytable above. Lucky Lenny can collect it with a certain chance only in the non-winning rounds. When it happens, the Respin of the Base game will start automatically with the same stake as in the previous round that will be free for you.

### **Game Functions**

#### **Credit Information**

The value next to the ‘CREDIT’ label indicates the player’s current credit balance.

#### **Bet Information**

The value next to the ‘BET’ label indicates the player’s current total bet.

#### **Information Area**

The information area may display various messages to the user. Also, it graphically presents the winnings (symbols collected with their payout) from the current spin and is updated on the fly during the current spin.

#### **Stake Level**

By pressing the '+' or '-' buttons, the player is able to increase or decrease the stake-level respectively.

#### **Spin Button**

By pressing the spin button (the button with the two rotating arrows), the player starts the game (alternatively, by pressing the spacebar on desktop).

#### **Turbo Spin Button**

The turbo spin button (two triangles pointing to the right) allows the player to increase the spin speed.

#### **Autoplay Start (and Stop) Button**

The autoplay start button (one triangle pointing right within a rotating arrow) allows the player to turn on autoplay. Pressing this button will open a dialog with various options for customising their autoplays. Pressing the autoplay stop button will stop autoplay after the current spin.

#### **Volume Button**

The volume button allows the player to turn on or off the sound of the game.

**Time**

Current time (as taken from the players' device) is displayed in the top-right of the game.

**Autoplay Dialog****Number Of Autoplays Slider**

This slider is used to adjust the number of autoplays.

**Stop If Single Win Exceeds Slider**

This slider is used to adjust the minimum per-spin win value at which autoplay ends.

**Stop If Total Loss Exceeds Slider**

This slider is used to adjust the minimum total loss value at which autoplay ends.

**Stop On Any Win Checkbox**

When checked, autoplays will end after any winning spin.

**Stop On Feature Checkbox**

When checked, autoplays will end when a Bonus Game is triggered.

**Start Autoplays Button**

This begins autoplay with the settings you have selected.

**Additional Information**

If your game round is interrupted, all game information and placed bets are stored until you reopen the game. You may continue your unfinished round from the point of interruption. If interrupted games are not resumed within a certain period, then they will be automatically closed. Any potential winnings will be credited to your account.

All monetary values in the game are displayed in the player's currency.

Payouts according to the payable only take place if the given amount of symbols has been matched.

Malfunction voids all pays and plays.

Not all features described in the rules may be offered in your jurisdiction.

Max win: 777x

Max payout: 1027x max stake.

These payout values and odds are based on the maximum observed payout in a series of 100,000,000 simulations.
