

PLINKO!

About the game

In this game, balls drop from the top of a pyramid and fall down towards multiplier values. The multipliers in the middle will be reached more frequently, while the multipliers at the edges will be reached less frequently - but they will award more!

The RTP (return-to-player) of the game is 96.00%

Minimum bet: ZAR1.00

Maximum bet: ZAR100.00

How To Play

Place at least one bet to drop a ball, and wait for the ball to reach the bottom of the pyramid and fall into one of the multipliers.

Before placing a bet, row and volatility settings can be optionally adjusted on the main game screen. Both of these settings will affect the possible multipliers at the bottom of the pyramid.

Rows: choose how many rows to play with and what level of volatility you prefer. The minimum number of rows that can be selected is 8 and the maximum is 16. The selected number of rows affects the number of multipliers at the base of the pyramid: for each additional row, the available number of multipliers increases by 1.

Volatility: the selected volatility setting changes the configuration of the multipliers at the bottom of the pyramid. The available Volatility levels that can be selected are Low, Medium and High.

The game settings cannot be changed during an ongoing round. Any active balls must reach the bottom of the pyramid before changing volatility or row settings.

Payout Display

Multipliers are shown under the playing field pyramid. The multipliers show how much you will be awarded if your ball lands there. The actual amount awarded will be calculated by multiplying the bet level with the awarded multiplier.

Golden Ball

Every ball dropped has a chance to be golden. These special golden balls will multiply the payout value they fall into by an additional 10x.

Game Functions

Time

Current time (as taken from the players' device) is displayed in the top-right of the game.

Credit Information

The value next to the 'CREDIT' label indicates the player's current credit balance.

Bet Information

The value next to the 'BET' label indicates the player's current total bet.

Stake Level

By pressing the '^' or 'v' buttons, the player is able to increase or decrease the stake level respectively.

Turbo

Turbo is activated (and deactivated) by selecting the icon with the lightning bolt on it. This mode provides a faster gameplay experience.

Autoplay

Using Autoplay will let you play a number of game rounds automatically. You can choose from a number of options. Once selected, the Bet button will activate Autoplay. The remaining number of rounds is displayed, and Autoplay can be stopped by pressing the same button.

Return to player

Max win: ZAR2,000,000.00

Max win odds: 1 : 983,284

RTP: 96.00%

Additional Information

In the event of a game interruption, games in progress cannot be restored. However, any potential winnings will be credited to your account.

Malfunction voids all pays and plays.

Not all features described in the rules may be offered in your jurisdiction.
