## Red Tiger Games

### 10,001 Nights

#### SPECIAL SYMBOLS AND FEATURES

##### FEATURE LAMPS

Oil Lamp symbols may appear on any spin until all features are unlocked. Collect Oil Lamp symbols to progressively fill the Feature Lamps until each successive feature is unlocked.

Once a feature is unlocked it will be triggered on the next spin at the same stake and may continue to trigger randomly on any future spins at that stake. More than one feature may trigger in the same spin if there is more than one feature unlocked.

Feature Lamp requirements:

- First Stage - 6 Oil Lamps required. Unlocks Imperial Spin feature.
- Second Stage - 7 Oil Lamps required - 13 in total. Unlocks Random Wilds feature.
- Third Stage - 8 Oil Lamps required - 21 in total. Unlocks Multi-Pick feature.
- Fourth Stage - 9 Oil Lamps required - 30 in total. Unlocks Mega Wilds feature.

When an Oil Lamp lands, it fills a Feature Lamp and then disappears from the reels, resulting in a fewer Oil Lamps available to land on subsequent spins.

##### IMPERIAL SPIN

All low-paying symbols are removed from the reels leaving only high-paying symbols available to land during the spin.

##### RANDOM WILDS

A random number of Wild symbols land on the reels.

##### MULTI-PICK

Three cards are presented to choose from, each representing a different win Multiplier. The Multiplier chosen is applied to the next win that occurs.

If a Multiplier is active before you enter Destiny Spins, the Multiplier will be applied to the first win that occurs. If a Multiplier is active at the end of Destiny Spins, it will be applied to the next win that occurs after the bonus round has finished.

##### MEGA WILDS

One or more 1x4 Mega Wild Symbols appear on the screen.

#### DESTINY SPINS

The Free Spins bonus is triggered when at least three Destiny Spins symbols land on the reels. Three symbols trigger 8 bonus spins, four symbols trigger 10 bonus spins and the maximum five symbols trigger 12 bonus spins.

Destiny Spins symbols may also land during Free Spins for a re-trigger. If this happens then three symbols trigger 6 additional bonus spins, four symbols trigger 7 additional bonus spins and the maximum five symbols trigger an additional 8 bonus spins.

#### HOW TO PLAY 10,001 NIGHTS

##### GAME PROGRESS

Any progress features in the game, including symbols locked onto the reels which affect subsequent spins, are saved for your game at the stake level you are playing at.

You can have different progress levels at different stakes on the same game and move between them by changing the stake.

If you are awarded free spins from a promotional campaign any progress in the main game including any locked symbols, will be saved and be available to continue playing at the same stake once the free spins have been completed.

Please note that this stateful game saves its state forever.

## Gamble Wheel

After a spin which results in a win of more than 1.00 ZAR, the "Gamble" button is activated, and the player may enter the Gamble game for a chance to increase their win.

The Gamble Wheel offers the player true odds and always plays 100% randomly with 95.73% RTP. The player can configure the Gamble using the following options:

Pressing the plus button increases the potential win on the ladder and recalculates the wheel's chances. Pressing the minus button decreases the potential win. The green section of the wheel displays the exact chance of winning. The red section displays the exact chance of losing. If the player commits to pressing the Gamble button, the pointer within the wheel will spin. If the pointer lands in the green area, the player wins the highlighted prize which they chose in advance. If the pointer lands on the red area the Gamble is over, and the player returns to the instant game.

The player doesn't have to collect the winnings manually. They are auto collected after every Gamble round. Press the "Collect" button to collect your winnings and return to the instant game.

If the Gamble feature is closed, the player cannot return to the feature unless they win another round in the instant game. The Gamble feature is disabled during auto-play.

The prize value from one pay line is equal to the total stake divided by the number of pay lines, multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Total stake is 2. Total pay lines are 20. Symbol Multiplier for length of 5 is 300. The win for 1 pay line with this symbol and length would be calculated as such:  $2 / 20 * 300 = 30$ .

The prize value from one pay line in a Multiline game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Stake is 2. Symbol Multiplier for length of 5 is 20. The win for 1 pay line with this symbol and length would be calculated as such:  $2 * 20 = 40$ .

The prize value from one way or cluster in a Ways or Winning Clusters game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple ways or clusters, the total win values are summed.

Example: Total stake = 2. Symbol win Multiplier = 2. Win =  $2 * 2 = 4$ .

Any Scatter Symbol wins will be paid in addition to any other symbol wins occurring on the same spin.

Please be aware that each account allows only a single Red Tiger game to be played at any one time.

Therefore, a game may not be played on more than one device, or multiple games on the same device simultaneously. Doing so may lead to various errors.

### Gamble Wheel

After a spin which results in a win of more than 1.00 ZAR, the "Gamble" button is activated, and the player may enter the Gamble game for a chance to increase their win.

The Gamble Wheel offers the player true odds and always plays 100% randomly with 95.77% RTP. The player can configure the Gamble using the following options:

Pressing the plus button increases the potential win on the ladder and recalculates the wheel's chances. Pressing the minus button decreases the potential win. The green section of the wheel displays the exact chance of winning. The red section displays the exact chance of losing. If the player commits to pressing the Gamble button, the pointer within the wheel will spin. If the pointer lands in the green area, the player wins the highlighted prize which they chose in advance. If the pointer lands on the red area the Gamble is over, and the player returns to the instant game.

The player doesn't have to collect the winnings manually. They are auto collected after every Gamble round. Press the "Collect" button to collect your winnings and return to the instant game.

If the Gamble feature is closed, the player cannot return to the feature unless they win another round in the instant game. The Gamble feature is disabled during auto-play.

The prize value from one pay line is equal to the total stake divided by the number of pay lines, multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Total stake is 2. Total pay lines are 20. Symbol Multiplier for length of 5 is 300. The win for 1 pay line with this symbol and length would be calculated as such:  $2 / 20 * 300 = 30$ .

The prize value from one pay line in a Multiline game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Stake is 2. Symbol Multiplier for length of 5 is 20. The win for 1 pay line with this symbol and length would be calculated as such:  $2 * 20 = 40$ .

The prize value from one way or cluster in a Ways or Winning Clusters game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple ways or clusters, the total win values are summed.

Example: Total stake = 2. Symbol win Multiplier = 2. Win =  $2 \times 2 = 4$ .

Any Scatter Symbol wins will be paid in addition to any other symbol wins occurring on the same spin.

Each spin awards different ways to win combinations depending on the total number of symbols which land on the reels.

Landing a maximum 7 symbols on each of the 6 reels offers a potential 117,649 Mega Ways™ to win!

#### FIRE BLAST

#### DRAGON'S EGG MULTIPLIER

The Dragon's Egg Multiplier is a WIN MULTIPLIER that applies to all wins in a spin.

The Dragon's Egg Multiplier is activated, following a win, and the Multiplier value increases with each subsequent consecutive win up to a possible 50x win Multiplier. After a non-winning spin (except during Free Spins), the feature resets. The Dragon's Egg Multiplier is always activated, during FREE SPINS. If the Multiplier in the base game is already active when a Free Spins round begins, the Multiplier value is carried over, into Free Spins where it will continue to build with each win regardless of any non-winning Free Spins. At the end of the bonus round, the active Multiplier is carried over, back into the base game, where it will continue to build with subsequent consecutive wins, until the next non-winning spin.

#### DRAGON'S EYE BOOST

On a winning spin, the Dragon's Eye Boost may randomly trigger and boost the current Dragon's Egg Multiplier by up to 10x.

#### FREE SPINS

Three FREE SPINS symbols anywhere on the reels trigger a random number of FREE SPINS. Pick a dragon symbol to determine how many Free Spins have been won. During FREE SPINS the Dragon's Egg Multiplier does not reset after a non-winning spin.

During Free Spins, symbols that form part of a winning way, after paying out, will burn up and be replaced by new falling symbols. Each winning respin will also increase the Dragon's Egg Multiplier.

The Dragon's Egg Multiplier does not reset during Free Spins. At the end of the bonus round, the active Multiplier is carried over, back into the base game, where it will continue to build with subsequent consecutive wins, until the next non-winning spin.

#### DRAGON'S KINDNESS

When two Free Spins symbols land in a spin, the dragon may randomly breathe fire into the reels to add one more Free Spins symbol and trigger the bonus round. This cannot happen during Free Spins.

## Gamble Wheel

After a spin which results in a win of more than 1.00 ZAR, the "Gamble" button is activated, and the player may enter the Gamble game for a chance to increase their win.

The Gamble Wheel offers the player true odds and always plays 100% randomly with 95.77% RTP. The player can configure the Gamble using the following options:

Pressing the plus button increases the potential win on the ladder and recalculates the wheel's chances. Pressing the minus button decreases the potential win. The green section of the wheel displays the exact chance of winning. The red section displays the exact chance of losing. If the player commits to pressing the Gamble button, the pointer within the wheel will spin. If the pointer lands in the green area, the player wins the highlighted prize which they chose in advance. If the pointer lands on the red area the Gamble is over, and the player returns to the instant game.

The prize value from one pay line is equal to the total stake divided by the number of pay lines, multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Total stake is 2. Total pay lines are 20. Symbol Multiplier for length of 5 is 300. The win for 1 pay line with this symbol and length would be calculated as such:  $2 / 20 * 300 = 30$ .

The prize value from one pay line in a Multiline game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Stake is 2. Symbol Multiplier for length of 5 is 20. The win for 1 pay line with this symbol and length would be calculated as such:  $2 * 20 = 40$ .

The prize value from one way or cluster in a Ways or Winning Clusters game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple ways or clusters, the total win values are summed.

Example: Total stake = 2. Symbol win Multiplier = 2. Win = 2x2 = 4.

Any Scatter Symbol wins will be paid in addition to any other symbol wins occurring on the same spin.

Please be aware that each account allows only a single Red Tiger game to be played at any one time. Therefore, a game may not be played on more than one device, or multiple games on the same device simultaneously. Doing so may lead to various errors.

## Dynamite Riches

### SPECIAL SYMBOLS AND FEATURES

#### DYNAMITE WILDS AND GAME PROGRESS

The game features are locked at the start of the game. To unlock them you have to land Dynamite Wild symbols which light the fuse. Dynamite Wilds may land on any reel. Each Dynamite Wild counts for 1 step of game progress.

The game progresses in four stages - one for each of the locked features. At the end of each stage a feature is unlocked, and a new round starts. When a feature is unlocked it is triggered in the next spin and triggers randomly in future spins. More than one feature may trigger in the same spin if there is more than one feature unlocked.

Progress breakdown:

- First Stage - 6 Dynamite Wilds required. Unlocks Remove Low-Paying Symbols feature.
- Second Stage - 7 Dynamite Wilds required - 13 in total. Unlocks Random Wilds feature.
- Third Stage - 8 Dynamite Wilds required - 21 in total. Unlocks Multiplier feature.
- Fourth Stage - 9 Dynamite Wilds required - 30 in total. Unlocks Mega Wilds feature.

When a Dynamite Wild lands, it lights the progress fuse and gets removed from the reels, resulting in a lower chance of landing Dynamite Wilds with each step. Once the fourth and final feature is unlocked, Dynamite Wilds will no longer land on the reels.

#### REMOVE LOW-PAYING SYMBOLS

When this feature triggers, all low-paying symbols are removed from the reels and only high-paying symbols land for this spin.

#### RANDOM WILDS

When this feature triggers, a random number of Wilds will land on the reels.

#### MULTIPLIER

When this feature triggers, it adds a Win Multiplier which is applied to the next win that occurs.

If a Multiplier is active before you enter Gold Spins, the Multiplier will be applied to the first win that occurs. If a Multiplier is active at the end of the Free Spins, it will be applied to the next win that occurs in the base game.

#### MEGA WILDS

When this feature triggers, it adds one or more Wild Super symbols of 2x2 to 3x3 size on the reels.

#### GOLD SPINS

Gold Spins symbols may land on any reel.

3 or more Gold Spins symbols anywhere on the reels trigger 8 bonus spins. Each additional Gold Spins symbol over, the minimum required awards 2 more bonus spins.

Gold Spins symbols may also land during Free Spins. 3 or more Gold Spins symbols anywhere on the reels during Free Spins trigger 4 additional bonus spins. Each additional Gold Spins symbol over, the 3 minimum required awards 1 more bonus spin.

#### HOW TO PLAY DYNAMITE RICHES

##### GAME PROGRESS

Any progress features in the game, including symbols locked onto the reels which affect subsequent spins, are saved for your game at the stake level you are playing at.

You can have different progress levels at different stakes on the same game and move between them by changing the stake.

If you are awarded free spins from a promotional campaign any progress in the main game including any locked symbols, will be saved and be available to continue playing at the same stake once the free spins have been completed.

Please note that this stateful game saves its state forever.

In the regular game, if there are more Aces on the top or bottom row there is a chance that the Golden Pointer will move to that row and trigger a second chance.

#### Cryptex Cash

During Golden Spins, when the Cryptex Code is cracked, an Instant Prize and 3 Bonus Spins are awarded and the Code upgrades. When the highest-paying Code is reached it will remain for the duration of Golden Spins. The Lucky Leprechaun may trigger at any time, offering a pick of three different mushrooms representing the different features.

#### LUCKY WAYS

The Lucky Ways feature swaps symbols for a guaranteed win, awarding win ways of up to a six of a kind.

#### RANDOM WILDS

The Random Wilds feature adds up to five WILD symbols anywhere on the reels.

#### WILD STACKS

The Wild Stacks feature turns up to four reels into WILD STACKS which have a Multiplier based on the size of the reel.

If more than one Wild Stack symbol makes up part of a win way, then the Multiplier values stack - for example  $3X * 3X = 9X$  - increasing the total payout for the win way.

#### LUCKY SPINS

Three or more LUCKY SPINS symbols award LUCKY SPINS. More LUCKY SPINS symbols award more Free Spins.

At the beginning of the bonus, the player will pick which feature will be active throughout the whole LUCKY SPINS bonus.

A retrigger of more LUCKY SPINS during LUCKY SPINS will not change that pick and no other features but the chosen one will activate.

The Lucky Leprechaun will not appear during LUCKY SPINS.

## LUCKY SPINS in LUCKY SPINS

Land three LUCKY SPINS scatter symbols in LUCKY SPINS during a spin or a respin to unlock five EXTRA BONUS SPINS.

Landing more than three LUCKY SPINS symbols will award five MORE BONUS SPINS for each additional LUCKY SPINS symbol.

## LUCKY SPINS WIN MULTIPLIER

Each win during LUCKY SPINS increases the WIN MULTIPLIER to boost your next win. The LUCKY SPINS WIN MULTIPLIER does not reset for the duration of LUCKY SPINS and can only increase with each WIN.

### Gamble Wheel

After a spin which results in a win of more than 1.00 ZAR, the "Gamble" button is activated, and the player may enter the Gamble game for a chance to increase their win.

The Gamble Wheel offers the player true odds and always plays 100% randomly with 95.72% RTP. The player can configure the Gamble using the following options:

Pressing the plus button increases the potential win on the ladder and recalculates the wheel's chances. Pressing the minus button decreases the potential win. The green section of the wheel displays the exact chance of winning. The red section displays the exact chance of losing. If the player commits to pressing the Gamble button, the pointer within the wheel will spin. If the pointer lands in the green area, the player wins the highlighted prize which they chose in advance. If the pointer lands on the red area the Gamble is over, and the player returns to the instant game.

The prize value from one pay line is equal to the total stake divided by the number of pay lines, multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Total stake is 2. Total pay lines are 20. Symbol Multiplier for length of 5 is 300. The win for 1 pay line with this symbol and length would be calculated as such:  $2 / 20 * 300 = 30$ .

The prize value from one pay line in a Multiline game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Stake is 2. Symbol Multiplier for length of 5 is 20. The win for 1 pay line with this symbol and length would be calculated as such:  $2 * 20 = 40$ .

The prize value from one way or cluster in a Ways or Winning Clusters game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple ways or clusters, the total win values are summed.

Example: Total stake = 2. Symbol win Multiplier = 2. Win =  $2 * 2 = 4$ .

Any Scatter Symbol wins will be paid in addition to any other symbol wins occurring on the same spin.

Please be aware that each account allows only a single Red Tiger game to be played at any one time. Therefore, a game may not be played on more than one device, or multiple games on the same device simultaneously. Doing so may lead to various errors.

## Gonzo's Quest Megaways

### SPECIAL SYMBOLS AND FEATURES

#### MegaWays™

Each spin awards a different way to win combination depending on the total number of symbols which lands on the reels.

Landing a maximum 7 symbols on each of the 6 reels offers a potential 117,649 MegaWays™ to win!

#### Avalanche™ Feature

The symbols fall into positions on the reels, instead of spinning. Symbols in winning combinations explode and disappear, leaving space for a second Avalanche™ of symbols for a chance of bigger wins.

The Avalanches™ continue until there are no more wins.

#### Avalanche™ Multiplier

Winning ways trigger the Avalanche™ Multiplier which increases the reward from each winning way occurring during the spin until it reaches the maximum Multiplier. In the basic game the first win way increases it to X2, the second to X3 and the third to X5 which remains for the duration of the spin and applies to all subsequent wins.

The Avalanche™ Multiplier resets after the end of the spin.

#### Earthquake

The slot may randomly start to shake, and all low-paying symbols will be destroyed allowing only high-paying symbols to take their place in the following respins.

#### Unbreakable Wilds

Wilds do not break when they participate in a win. Their number will be limited to two on the reels at the same time. The first one can land on the first three reels and the second one on the second three reels. Wilds substitute for both paying symbols and Free Fall symbols.

#### Free Fall

Triggered by a win way of at least three Free Fall symbols or a way of at least two Free Fall symbols and a Wild symbol.

Each symbol that participates in the win way awards 3 Free Spins.

In Free Fall the Avalanche™ Multiplier's progression is as follows:

X3, X6, X9, X15.

After the end of the bonus round, the player returns to the previous scene, where the symbols that triggered Free Fall are destroyed for a chance of even more wins. The win Multiplier from the last respin before the bonus round also remains until there are no more wins.

Additional Free Spins may be won during Free Fall.

#### WILD SYMBOLS

The unlocked WILD ISLAND ROW introduces extra WILD symbols to the reels. They may appear with or without win Multipliers of 2x, 3x, 4x or 5x.

If more than one WILD symbol with a Multiplier makes up part of a win line, then the Multiplier values stack - for example  $3X * 3X = 9X$  - increasing the total payout for the win line.

#### WILD MONKEY

When the WILD MONKEY symbol lands, the monkey removes all low-paying symbols from the reels, allowing new high-paying symbols to take their place.

The WILD Monkey will remain in the position of the last removed symbol, and a Multiplier will be applied. It may appear at any time except during BATTLE SPINS.

#### BATTLE SPINS

Triggered by three BATTLE SPINS symbols anywhere on the reels. WILD symbols that appear during BATTLE SPINS will lock for the duration of the Bonus Round. FIRE! symbols and Captain Blackbeard may appear during BATTLE SPINS.

#### FIRE! SYMBOL

Appears during BATTLE SPINS. When it lands, one or more cannonballs will be fired. Cannonballs either land on the reels turning into WILD symbols or hit the opposite ship to award +1 Spin.

Cannonballs may land on other WILD symbols, adding or increasing a Multiplier to it. Up to two FIRE! symbols may appear at once.

FIRE AWAY!

Captain Blackbeard may appear during BATTLE SPINS. He throws WILD bombs which land on the reels.

## Gamble Wheel

After a spin which results in a win of more than 1.00 ZAR, the "Gamble" button is activated, and the player may enter the Gamble game for a chance to increase their win.

The Gamble Wheel offers the player true odds and always plays 100% randomly with 95.72% RTP. The player can configure the Gamble using the following options:

Pressing the plus button increases the potential win on the ladder and recalculates the wheel's chances. Pressing the minus button decreases the potential win. The green section of the wheel displays the exact chance of winning. The red section displays the exact chance of losing. If the player commits to pressing the Gamble button, the pointer within the wheel will spin. If the pointer lands in the green area, the player wins the highlighted prize which they chose in advance. If the pointer lands on the red area the Gamble is over, and the player returns to the instant game.

The player doesn't have to collect the winnings manually. They are auto collected after every Gamble round. Press the "Collect" button to collect your winnings and return to the instant game.

If the Gamble feature is closed, the player cannot return to the feature unless they win another round in the instant game. The Gamble feature is disabled during auto-play.

The prize value from one pay line is equal to the total stake divided by the number of pay lines, multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Total stake is 2. Total pay lines are 20. Symbol Multiplier for length of 5 is 300. The win for 1 pay line with this symbol and length would be calculated as such:  $2 / 20 * 300 = 30$ .

The prize value from one pay line in a Multiline game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Stake is 2. Symbol Multiplier for length of 5 is 20. The win for 1 pay line with this symbol and length would be calculated as such:  $2 * 20 = 40$ .

The prize value from one way or cluster in a Ways or Winning Clusters game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple ways or clusters, the total win values are summed.

Example: Total stake = 2. Symbol win Multiplier = 2. Win =  $2 * 2 = 4$ .

Any Scatter Symbol wins will be paid in addition to any other symbol wins occurring on the same spin.

Please be aware that each account allows only a single Red Tiger game to be played at any one time. Therefore, a game may not be played on more than one device, or multiple games on the same device simultaneously. Doing so may lead to various errors.

## Gamble Wheel

After a spin which results in a win of more than 1.00 ZAR, the "Gamble" button is activated, and the player may enter the Gamble game for a chance to increase their win.

The Gamble Wheel offers the player true odds and always plays 100% randomly with 95.69% RTP. The player can configure the Gamble using the following options:

Pressing the plus button increases the potential win on the ladder and recalculates the wheel's chances. Pressing the minus button decreases the potential win. The green section of the wheel displays the exact chance of winning. The red section displays the exact chance of losing. If the player commits to pressing the Gamble button, the pointer within the wheel will spin. If the pointer lands in the green area, the player wins the highlighted prize which they chose in advance. If the pointer lands on the red area the Gamble is over, and the player returns to the instant game.

The player doesn't have to collect the winnings manually. They are auto collected after every Gamble round. Press the "Collect" button to collect your winnings and return to the instant game.

If the Gamble feature is closed, the player cannot return to the feature unless they win another round in the instant game. The Gamble feature is disabled during auto-play.

The prize value from one pay line is equal to the total stake divided by the number of pay lines, multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Total stake is 2. Total pay lines are 20. Symbol Multiplier for length of 5 is 300. The win for 1 pay line with this symbol and length would be calculated as such:  $2 / 20 * 300 = 30$ .

The prize value from one pay line in a Multiline game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple win lines, the total win values are summed. If more than one win occurs on the same pay line, the largest win is paid.

Example: Stake is 2. Symbol Multiplier for length of 5 is 20. The win for 1 pay line with this symbol and length would be calculated as such:  $2 * 20 = 40$ .

The prize value from one way or cluster in a Ways or Winning Clusters game is equal to the stake multiplied by the symbol Multiplier advertised in the pay table. Where multiple wins occur on multiple ways or clusters, the total win values are summed.

Example: Total stake = 2. Symbol win Multiplier = 2. Win = 2x2 = 4.

Any Scatter Symbol wins will be paid in addition to any other symbol wins occurring on the same spin.
